

**Your international
full-service partner**

About us

The MF Group comprises the parent company MF Production AB, MF Precision Production Ltd, and B. Ströms Mekaniska AB.

Founded in Tierp, Sweden, in 1992, we have over 30 years of experience manufacturing complex parts and tools for the machine, medical, electronics, and defence industries. Our production facilities are located in Tierp and Degerfors, Sweden, as well as Shenzhen, China, where we have operated a workshop to the same high standards since 2005.

We prioritize close and long-term customer relationships, offering both individual manufacturing operations and comprehensive solutions. Our skilled employees are the cornerstone of our success, reflected in our low staff turnover. **We support the United Nations' Global Goals for Sustainable Development.**

GLOBALA MÅLEN
för hållbar utveckling

Quality and competence

We are proud of our high quality, which is built on skilled employees, a modern machinery park, and low complaint rates. Our customers choose us for our quality products, and we also value quality in the way we run our company. We work systematically with quality and environmental matters to be a reliable partner.

The MF Group's machinery park is modern and well-maintained, allowing us to produce high-quality products from challenging materials such as high-alloy steel, carbide, stainless steel, and composites. Our strength is in producing complex components and tools with extremely high surface finish, dimension, and shape requirements.

We operate under a unified business system across the MF Group. With our three manufacturing sites, we can produce prototypes, small batches, and large series, allowing us to grow alongside our customers. Within the Group, we hold ISO 9001, 9002, 14001, and 45000 certifications.

- Advanced subcontract and contract manufacturing of precision mechanical components in metal and plastic.
- Precision measurement to thousandths of a millimetre.
- Specialists in cutting processes, including turning and milling.
- Spline/gear machining.
- Laser marking and engraving.
- Grinding, including surface grinding, internal grinding, and cylindrical grinding.
- Sinking and wire EDM (Electrical Discharge Machining).
- Surface and heat treatments for all materials, including anodising, black oxidation, powder coating, etc.
- Rubber and plastic moulding onto metal components.
- Assembly.
- Final packaging and delivery.
- Traceability and certification management.

MF Production

The parent company, MF Production, is based in Tierp and remains under the same ownership as when it was founded in 1992. Our team of approximately 25 employees manages manufacturing, assembly, and procurement for world-class global companies in the industrial and medical technology sectors.

Tierp is fully self-sufficient in electricity, thanks to solar power.

The most rewarding aspect of my job is growing the business; continuous improvement is a major focus. This allows us to consistently enhance our offerings to customers. The Group's capacity and expertise enable us to be a production partner that delivers the highest quality and service, tailored to our customers' diverse needs.

– Tommy Svensson, CEO

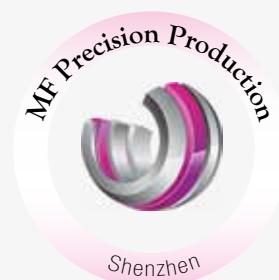

Since the start in 2005, I have had the privilege of working closely with the Swedish management team. Our unique combination of Swedish quality principles, dedicated employees, and state-of-the-art production technology makes us a strong player in series production.

- Mike Zhang, Site Manager, Shenzhen factory

Our latest investment in 2024: a multi-operation lathe with a B-axis, turret, and bar feeder.

MF Precision Production

MF Precision Production Ltd, our Chinese subsidiary in Shenzhen, was established in 2005 and has since grown to approximately 150 employees with an impressive machinery park of around 75 machines. The Chinese management team has been with us since the beginning, working closely with our skilled employees on precision manufacturing in close collaboration with the Swedish parent company. We maintain the same high quality standards as in Sweden, and our focus on both personnel and cutting-edge technology is crucial for meeting the high standards upheld by the MF Group.

With our significant capacity, MF Precision Production can deliver high-precision components in small, medium, and large series, serving both the Chinese market and exports to Europe. Our high-quality products are utilised by customers across various industries, including a major player in the semiconductor sector.

Din kompletta industrileverantör

Kvalitet för oss är när kunden kommer tillbaka och inte varan.

Inriktningen på vår verkstad är konstruktioner där svetsning och maskinbearbetning ingår, tex maskiner, maskindelar eller kompletta produktionslinjer för leverans i hela världen.

På Simeco har vi flera mekaniker med många års erfarenhet i branschen som utför servicejobb, reparationsjobb, montage och installationer.

Ströms Mekaniska

In 2020, the MF Group acquired Ströms Mekaniska in Degerfors, a contract manufacturer with specialised expertise in advanced prototypes and small to medium-sized series. The company has extensive know-how in 5-axis milling, multi-operation turning, and advanced wire and sinker EDM. Ströms Mekaniska primarily serves the defence industry but also supplies the energy sector and general industry, where their precision and technical expertise are essential.

Snabb och tillförlitlig
verktygsinmätning...
...även i våta miljöer.

Renishaws NC4+ Blue kontaktfria verktygsinställare erbjuder hög precision, verktygsinmätning med hög hastighet och detektering av verktygsbrott, vilket möjliggör processtyrning för alla typer av verktygsmaskiner. Systemet finns tillgängligt i flera olika storlekar för att passa de flesta tillämpningar med verktygsinställning.

RENISHAW 
apply innovation™

Nästa generation
probsystem för verktygsmaskiner

Den nya QE-serien är Renishaws senaste samling av probsystem med radioöverföring för verktygsmaskiner.

Dessa beprövade system hjälper verkstäder att omvandla sin produktionskapacitet via bl.a. automatiserad verktygsinställning i maskinen, detektering av verktygsbrott, detaljuppriktning och -inspektion.
